

## Reminders to Patients after having Appendix Removed

1. For patients that are anesthetized with their half part of body, must not sleep on pillow after laying down flat for 8 hours after surgery.
2. After conduct air evacuating, patients may have liquid type of foods, soft rice, then dry rice.
3. Patients may get off bed and walk around the 1st day after surgery.

4. For general appendicitis, there is no need for changing new pack if there is no extended peritonitis and infection to wounded part (unless patients are injected with liquid tube, then they should change new pack daily).

5. Patients may remove surgical stitches 7 days after surgery, then leave hospital.
